Scheuten Glas and Solar launch new websites

Scheuten Glas and Scheuten Solar are today launching their new websites. The new sites will enable visitors to easily find all relevant information surrounding the products, projects and added value provided by both companies. Scheuten Glas and Solar are part of the Scheuten Group, an international company providing total solutions in glass and solar energy systems.

At www.scheutenglass.com, Scheuten Glas presents its full product line of high-quality glass products in the field of thermal insulation, solar management, noise insulation, security, fire-resistance and design. These products are supplied from factories and sites in the Netherlands, Belgium and Germany. In-house manufacture of the basic product float glass in Osterweddingen (Germany) makes Scheuten active throughout the glass production chain. The website also shows visitors the finest projects Scheuten Glas has implemented, or for which they have supplied glass.

At www.scheutensolar.com, Scheuten Solar presents its total solutions in the field of solar energy. Through the new website, architects, roof owners (commercial and private individuals), investors and project developers will find their way to their (BI)PV system. Scheuten Solar is creating added value with powerful PV solutions, which consist of 'German-made' high-quality solar products. Furthermore, the website shows the finest solar projects the company has implemented under its own management. Scheuten Solar is active in all countries where solar energy is commercially viable.

– END –

Scheuten is a leading and fast growing international high volume manufacturer of total solutions in glass and solar energy systems with its head office in Venlo. Scheuten employs over 2000 staff and has achieved a turnover of over 500 million euros in 2010.

Scheuten continually invests in new developments. New innovative glass products are developed by combining knowledge from all its production facilities. Cooperation with leading universities and research institutes leads to sustainable, functional solutions in the fields of glass and solar technology.
